STANDARDS O.M.J./C.O.M. TYPE CANARIES

Property of C.O.M. / O.M.J. – Reproduction strictly prohibited /
Santa Maria da Feira - Portugal 2024 Congress OMJ section E1/ E2

At the initiative of the Interim President of the O.M.J., Candido Lorenzo Vidal, under the direction of the responsible for OMJ Section E Jorge Quintas, a meeting of expert judges of type canaries was held. The following countries were physically present: Germany, Spain, Portugal, the Netherlands, France, United Kingdom, Belgium, Turkey and Lebanon. By ZOOM: Uruguay and Serbia. These 11 countries met in Santa Maria da Feira, Portugal, on the 10th August 2024 to establish the update of these standards:

STANDARDS O.M.J. / C.O.M. OF TYPE CANARIES

The work they have done has allowed us to establish this document, which must be an important reference for all O.M.J. judges and for all breeders.

We hope that it will allow good harmonization among all member countries.

Updated January 2025

President of O.M.J.

João Liberado

Responsible Section E

Jorge Quintas

The elaboration of a standard is a work that involves the collaboration of a large team worldwide, for which OMJ is grateful for its collaboration.

The reproduction and use of all or part of these documents is prohibited without the authorization of their authors and the COM/OMJ (photos and text).

Only this version is recognized by the COM. All earlier versions are obsolete.

Generalities and Judgement

Section E – Type canaries, bred by the owner

Variety

- White background
- 100% Lipochrome
- Variegated Lipochrome
- 100 % Melanin
- Variegated Melanin

Except for :

Cinnamon Class : When existing, all cinnamon must go inside it, including variegated or melanine, intensive or non intensive unless existing intensive class, crest or non crest without white ground. ***Also includes all other different melanine : agate, isabel, pastel, jaspe, satinette, phaeo etc., without white ground.***

Lancashire (only lipochrome)

White (melanin accepted only in the crest)

Yellow (melanin accepted only in the crest)

Lizard (only melanin)

Blue (white ground)

Gold (yellow intensive and red intensive ground)

Silver (yellow non-intensive and red non-intensive ground)

Rheinländer (only lipochrome)

White (melanin accepted only in the crest)

Yellow (melanin accepted only in the crest)

Red (melanin accepted only in the crest)

Portuguese Harlequin (red mosaïque factor, mandatory variegated)

German Crest

Same as color canaries (melanin accepted only in the crest for the lipochromes).

Colors

<i>Red Factor allowed</i>	<i>Red factor not allowed</i>

Padovan	
Rheinländer	
Rogetto	
Salentino	
Yorkshire	
Raza Española	

Characteristics

Typical color of the variety according to the standard.

Pigment analysis (from the poephila monograph)

Considering that color is not a physical property of the objects around us, but rather a decoding of our brain that receives and processes certain information from the environment (electromagnetic waves that affect the field of view).

In fact, each of us distinguishes the different chromatic tones thanks to our entire visual system perceiving the range of reflected waves in space that determine the spectrum of vision.

Therefore, before analyzing this part of the judgment sheet, it is essential, both for a correct evaluation of the subjects, to understand the genetic mechanism of their mutations, and to know that the coloration is given by the pigments and the special structure of the plumage.

The pigments are distinguished in:

➤ **Lipochromes**, which attributes coloration by means of carotenoids acquired from the diet:

- Astaxanthine red color
- Lutein yellow color

➤ **Melanins**, which in turns are distinguished by :

- Eumelanin, which attributes to the plumage, depending on the concentration, the colors that go from black to dark brown;
- Pheomelanin, which attributes to the plumage, depending on the concentration, the colors that range from rust to yellow.

Lipochrome

Lipochromes are fatty pigments, which are generated in the bird, according to their diet, are deposited in the feathers, giving them their relative specific color. They are soluble in oils and fats. This dye is also observed in vegetables and called carotenoid, it gives rise to the yellow and red colors of the feathers. Different tones of lipochrome, depending on the concentration of it on the pen, generate precise gradations on the interested parts.

Melanin

Melanins are the other major group of pigments that give color to animals. It is a dark pigment, which is found in some cells of the body of animals. The main biological function is to protect individuals from ultraviolet rays, absorbing harmful radiation and transforming energy into harmless heat through a process called ultrafast internal conversion. This property allows melanin to dissipate more than 99.9% of the radiation absorbed by heat. These pigments are produced by the body, unlike lipochromes which are incorporated according to their diet.

Black eumelanin

Black eumelanin is a pigment present in all species of their ancestral variety. As the name suggests, it gives the bird black tones, provided that the feathers have a normal structure that allows them to absorb all the light waves they receive. As in lipochromes, black eumelanin can have infinite shades depending on the degree of presence in the feather. The more concentrated the pigment, the more black, intense and shiny tones will be obtained.

All feathers have the keratin layer, which covers the central area of the feather, where melanic pigments are located.

Brown Eumelanin

Brown eumelanin is given by a mutation. This mutation causes an alteration of the enzymes involved in the process of melanogenesis, reason why they are verified changes in it and the ancestral black eumelanin, becomes brown.

By itself, this pigment has the same characteristics as black eumelanin. The only variation is the tone it will bring to the bird's plumage. Similarly, under the normal structure of the feather will produce brown and/or brown shades.

As with black eumelanin in brown we can find infinite amounts of shades, which vary from the lightest to the darkest depending on the degree of concentration of the pigment that the feather possesses, ranging from very dark brown in cases of high concentration and tone, to light beige or cream in areas of great dispersion.

Pheomelanin

Pheomelanin, like black eumelanin, is found in almost all birds in their ancestral (classical) form.

It is the most interesting pigment to analyze given the wide range of shades it offers us depending on the degree of concentration, but mainly because unlike the pigments already considered (shades and tones in the same color range) pheomelanin has different colors (ochre yellow, rusty red, light brown, etc.) and each of them with a minor or major degree of expression, depending on the concentration of the pigment on large feathers and / or small feathers (example of small feathers, chest and back).

As well as the effect of light waves first absorbed by the feather and then refracted.

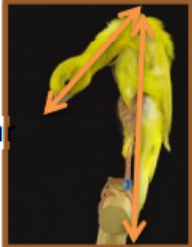

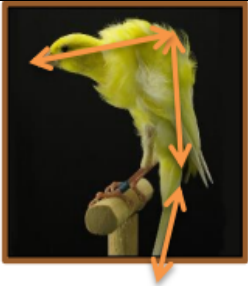

Shape and Size

Characteristics

Typical shape and size of the variety according to the standard.

Penalizing defects that do not correspond to the standard of the breed:

- Size : smaller or larger
- Head : flat or too small, or on the contrary too large and heavy in proportion with the body
- Back : concave or convex not corresponding to the standard of the breed
- Chest : flat or narrow or prominent and massive
- Trunk : too thin or too massive
- Legs : too long with a thin tibia and visible thighs, or too short or covered with plumage from the abdomen.

Way of measuring the size of a canary	
For breeds of normal position, are measured by the existing distance between the top of the head and the tip of the tail.	
For breeds with angular position, it is the sum of the lengths from the tip of the beak to the highest part of the shoulders plus the length of this part of the shoulders to the tip of the tail.	
For elliptical breeds, it is the sum of the lengths formed from the tip of the beak to the shoulders, from there to the base of the tail and from there to the tip of the tail.	
For “bowed” breeds it is the length of the arc from the top of the head to the tip of the tail.	

Plumage

Characteristics

The plumage consists of feathers and quills. It should be complete, intact, uniform, smooth, compact, tight and shiny (Except for frills canaries).

The feathers will have to overlap each other like well-ordered tiles.

The tail and wings should be compact, closed and intact.

Penalizing defects that do not correspond to the standard of the breed:

- Plumage too long and abundant, making the mantle less compact.
- Plumage too abundant on the flanks, eyebrows too bushy and marked.
- Split in the throat and on the chest
- Loose plumage on one or both flanks, abdomen or chest
- Rooster feathers (except in some frill canaries and the Crest)
- Back with feathers that tend to separate
- Short and sparse plumage (except in Gibber, Giboso and Giraldillo)
- Not finished moult
- Remiges and rectrices not uniform (with regrowing feathers)
- Broken remiges and rectrices (wings and tail)
- Wing feathers not complete and not uniformly in-line
- Fan or/and swallow tail are considered "serious defects"

Maintenance and Position

Attitude and position of the bird, in movement, not amorphous.

Characteristics

By position, we mean the attitude of the body of the subject and how it presents itself on the perch in the cage.

So the form and position, often compare and influence each other. A canary in which the form leaves something to be desired will hardly have a good position and vice versa. Excellent form can be summarized as: strength, pride and vivacity.

There are two types of penalty faults:

1. Character

- Wild or restless
- Shy and fearful

2. Structural

- Wings carried too low and slack along the body
- Crossed wings
- Tail carried too low with a concave or convex tail body line, not corresponding to the standard

Condition, Well-being and Impression

A bird will have a good impression if it presents itself clean and healthy.

Condition of the bird :

- Short beak
- Nails taken care of
- Health of the bird

Impression :

- Cleanliness of the cage
- Well-being of the bird

Stamm Definition

To be recognized as a stamm of color canary or type canary, the 4 birds that form it will have to be of the same breed, variety and type and be absolutely identical between them at the level :

- **The background color, including the difference between intensive and non-intensive (or mosaic).**
- **The melanin color (classic or mutation have to be the same in the 4 birds).**
- **Sex (if visible dimorphism)**

In case of non-conformity, each bird will be judged normally, but no harmony will be awarded.

Only the total sum of points for the four birds will be recorded, but whatever the result, the stamm will not be awarded a medal.

In posture canaries, although the above mentioned basilar uniformity requirements are maintained, the following are accepted in stamm.

- **Lipochrome stamm :**
 - A stamm composed only of pure lipochrome birds (no melanin spots will be tolerated)
- **Melanin stamm :**
 - A stamm composed only of pure melanin birds (no lipochrome spots will be tolerated).

- **Variegated stamms :**
- All shapes of variegation are accepted in 1 stamm if the 4 birds presented have more or less the same proportions of variegation so that they look alike. (A stamm must be as uniform as possible).

Exceptions are the Lancashire, the Rheinländer and the lipochromes German Crested, where the melanin is limited in the crest. For melanin German Crest, they must be 100% melanin, including the crest. The Lizard, where the location of the melanin is well defined on the body, beak and legs. In this case, the type of “cap” design must be respected: all with the “Clear or almost clear cap”, or all with the “broken cap”, or all with the “Non cap or almost non cap”.

Melanin is accepted in the beak, feet, toes and nails of lipochromes except for German Crest, Lancashire and Rheiländer.

For lipochromic canaries the melanin plumage is limited to the crest.

Will be accepted :

In stamm :

- **Lipochrome stamm** : 100% lipochrome.
- **Melanin stamm** : 100% melanin.

Only melanin spots in lipochromes and lipochromic spots in melanins on legs, beak and nails will be accepted. The exception are the Lancashire and Rheinländer. Also the German Crested where the color is judged according to the criteria of the color canaries.

Lipochrome variegation in the crest of melanin crested canaries will be considered variegated canaries.

- **Variegated stamm :**

All forms of variegation are accepted in stamm, as long as all 4 birds have the same proportion of variegation. They must also have the same melanin and the same background color.

If melanin spots are only found in the crest of crested canaries, these will be considered as 100% lipochrome.

These rules are also valid for birds exhibited in individual classes.

Harmony

General considerations :

A stamm is composed of 4 (four) subjects which, as part of the competition, must be of the same phenotype "Type, Category, Variety, Sex".

If the judge does not find these considerations, he must in any case judge all the subjects, which will not be considered as a stamm and therefore will not give points of harmony to this stamm and will be excluded from the competition.

Harmony: 6 points available.

The harmony of a stamm is defined by 6 points minus the difference between the subject with the highest points and the lowest points.

DESCRIPTION	Harmony Points
Identical Points Of the four subjects.	6
Difference of 1 point Between the subject with the highest points and the lowest points.	5
Difference of 2 points Between the subject with the highest points and the lowest points.	4
Difference of 3 points Between the subject with the highest points and the lowest points.	3
Difference of 4 points Between the subject with the highest points and the lowest points.	2
Difference of 5 points Between the subject with the highest points and the lowest points.	1
Difference of 6 points or more Between the subject with the highest points and the lowest points.	0

Criteria for Non Judgement

Criteria for Non judgement (NJ):

- Partial or total lack of a limb, one or more toes, one or more nails.
- Deformed foot(s), stiff toe(s).
- One-eyed or blind.
- Significant lack of rectrices and/or remiges.
- Presence of melanin (except in the crest) in Lancashire, Rheinlander or in lipochrome German Crest.
- Presence of lipochrome feathers in the Lizard (except in the cap) or in the German Crest melanin.
- Presence of one or more white nails in a Lizard or in a Black German Crest melanin.
- Presence of artificial pigmentation in breeds where that is not allowed.
- Obvious presence of plumage cyst ("lumps").
- Atypical bird.
- Injured and/or sick subject.
- Any subject with combination of several breeds.
- Any cases not included or not provided for above will be submitted to the Control Commission.

Criteria for Wrong Class

Criteria for Wrong Class (Declassé - DC):

Any bird presented for judgment in the wrong class must be downgraded (DC). It will be necessary for the judge to indicate the right class in which the bird should have been registered.

The bird is judged on the basis of the criteria of the right class where it should have been registered.

The bird in this situation, even if it has an assigned rating, will not receive any award.

If one or more birds are in the wrong class in a stam, then they are not considered a stam.

All birds will be judged, there is no total rating referring to the stam nor the note of the harmony of the stam, there are only the individual notes of the birds (in the judgment sheet must be indicated the correct class of the bird/s registered incorrectly).

In the event that all the birds of the stam are of the same class and are incorrectly registered in another class, they actually constitute a stam and the final notation of the stam is added as well as the harmony, but they will be considered wrong class (DC).

In both cases, regardless of the final rating, no prize will be awarded to these birds.

Criteria for Disqualification

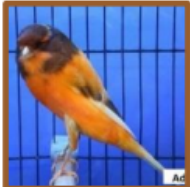

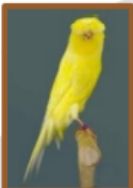

Any indication in the bird or in the cage that is relevant to be understood as a situation of manipulation or attempt to identify that bird. The bird will not be judged and the acronym - DQ (disqualified) will be placed on the judgment sheet.

Criteria for Disqualification (DQ):

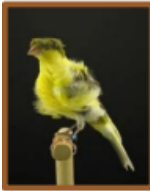

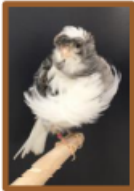

- Whenever a sign or marking of a bird or of a cage is visible. For example: bird with more than one ring, absence of the ring, ring with irregularity (open, unofficial, etc.)
- Any exogenous alteration/manipulation of the bird that involves tampering with its characteristics influencing its competitiveness. For example, feathers handled, glued, cut and/or painted.

STANDARDS O.M.J. / C.O.M. OF TYPE CANARIES E1

Portuguese Harlequin

Standard

Points	Descriptions
Body (shape) Chest/Wings 20	Elongated body, slender with slightly visible shoulders. Chest slightly rounded. Back narrow, straight, in line with the tail. Long wings, well adhered to the body and without crossing or drooping.
Crest / Head / Neck 15	The Crest (Crested Harlequin) - triangular shape (2 angles behind and 1 virtual in front) radiating from a central point at the top of the cap and dropping, adherent and symmetrically, without covering the eyes and beak. Head (Non-crested Harlequin) – Head narrow, elongated, wider behind than in front. Strong and proportionate beak. Bright and clearly visible eyes. Well-defined and harmonious neck, making the head clearly stand out of the body.
Size 15	16 cm / 6.3 inches.
Color 15	Balanced variegated with the simultaneous presence of red and chalk white lipochrome, having bright red in the characteristic areas of the mosaic red factor. The resulting sexual dimorphism is characterized by a greater extension of red lipochrome in males than in females. Artificial colouring is mandatory.
Position / Movement 15	Erect and majestic position (60°). Body well raised and head raised. Cheerful birds with agile movements.
Plumage 10	Smooth, compact, silky and well adhered to the body.
Legs and Tail 5	Strong, long and slightly bent legs, preferably variegated. Well visible thighs. Tail long, narrow and slightly bifurcated at the end, preferably variegated.
General Condition 5	Perfect health and hygiene. Vivacity and good adaptation to the show cage.

Artificial coloration mandatory.

German Crest (Deutsche Haube)

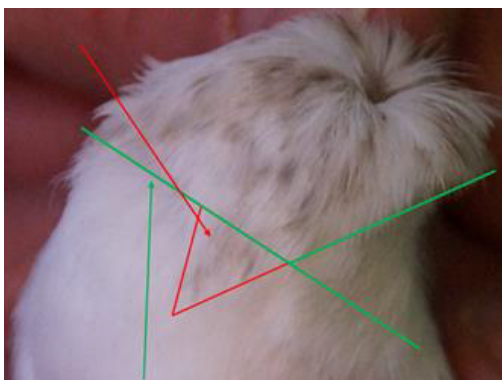

Standard

Points	Descriptions
Crest 30	The crest corresponds to the shape of the head, which is oval. It starts from a small and distinct central point. Seen from the side the crest partially covers the beak and extends to the nape of the neck. The passage of the crest into the plumage of the nape of the neck is smooth with no gap. The eyes remain visible.
Color 20	The characteristic of the color is the same as for the Color canaries (are judged according to the respective standard of the color canaries). No variegation is allowed. Lipochromes can have a lipochromatic, dark, grizzled crest. The presence of pigment in the crest of lipochromes cannot exceed the limit of the nap of the neck which is characterized by an imaginary straight line that passes between the mandibles and the eye.
Type and Size 15	The shape and type of the bird are identical to those of the color canaries. The wings, well adhered to the body without crossing each other. The size is 13.5 cm / 5.31 inches up to 14.5 cm / 5.70 inches.
Plumage 15	Smooth and well adhered to the body. Narrow and slightly forked tail, length according to the length of the bird.
Position 10	Alert, but not worried. Forming a 45° angle.
General condition 10	The bird is clean and shows itself in good condition.

Technical drawing

On the red line the melanin is out of the crest.

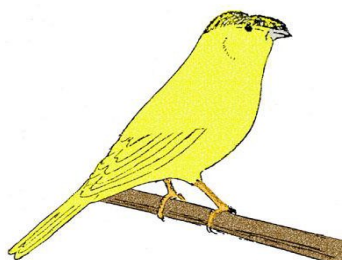

The green line is the delimitation of the authorized presence of melanin in the crest on lipochromic german crest.

Diameter 12 mm / 0.47 of an inch.

All colors are allowed except red.

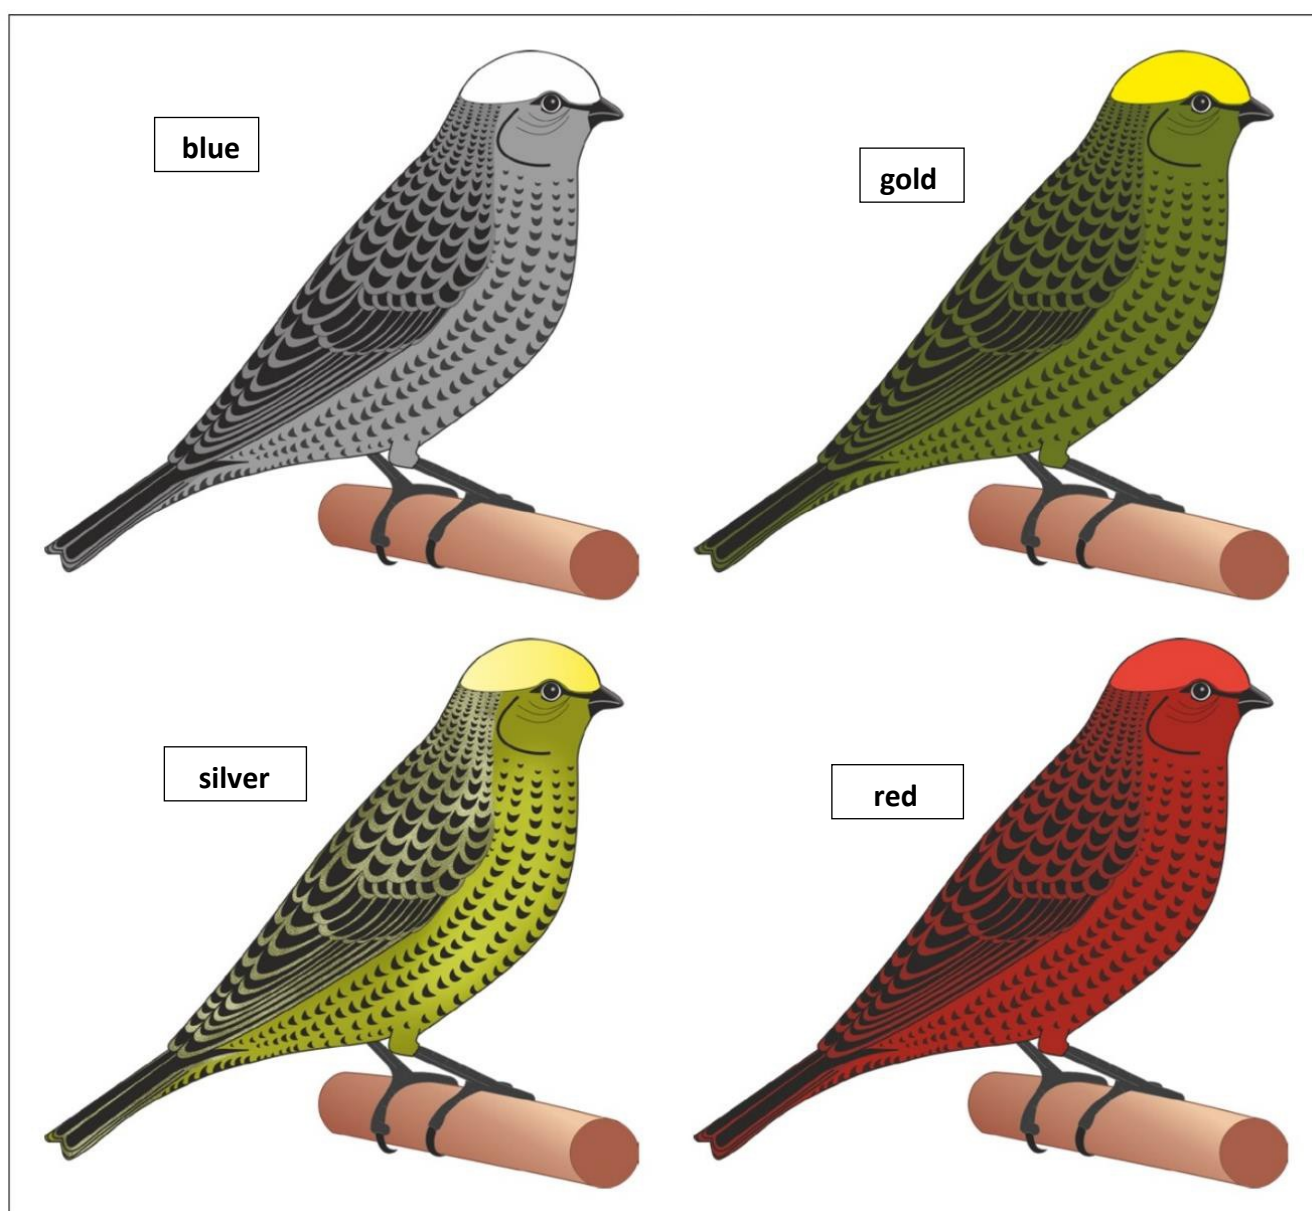

Lizard

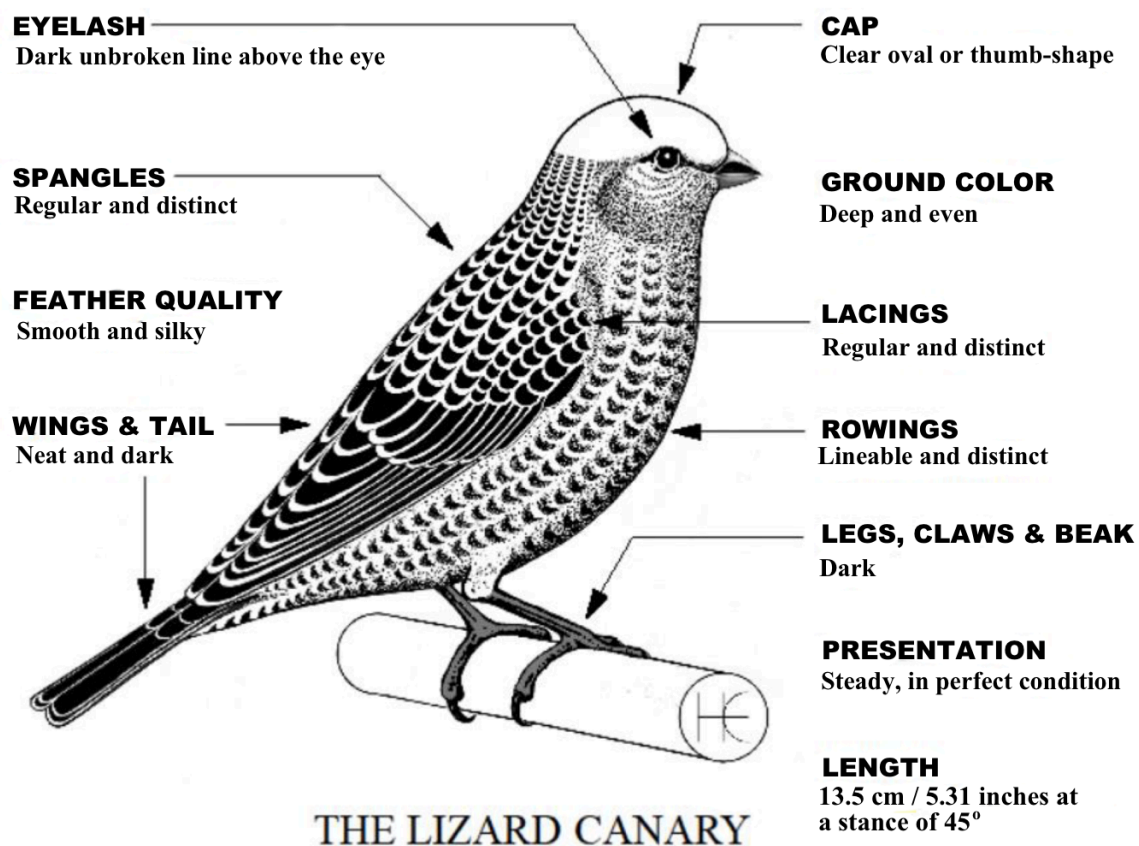

Standard

Points	Descriptions
Dorsal design (Spangles) 30	The design of the back is formed by small scales, in the shape of a half-moon, perfectly aligned and separated from each other, enlarging towards the base of the wings. It is highlighted, with the background color that appears between each design. The spangles are dark as possible. Eumelanin should be oxidized (as black as possible). The presence of brown is to be penalized. The design must be visible in the broken part of the cap.
Chest design (Rowings) 15	The chest design is slightly more attenuated and wider. Drawn from the underside of the beak to the base of the tail, the rowings remain clearly visible, aligned and increasing in size towards the belly and flanks.
Cap and Eyelash 15	a) The clear cap has an oval shape and starts above the upper mandible, passes over the eye and stops at the base of the skull. Its color is the background color without any spots inside. Up to 10% melanin is allowed in the border of the cap (Nearly clear cap). b) The broken cap shows one or more pigmented parts having the typical design of spangles and are the narrowing extension of the back design. c) The non cap have the design of the back that continues in a tapering fashion over the entire surface of the cap. Up to 10% lipochrome is allowed in the head (Nearly non cap). Note that all Lizards caps are equally rated according to the standard. This is valid for gold, silver or blue, colored or not. Also for clear cap, broken cap or non cap, male or female. Birds with a broken cap are equal for the standard and can only lose a few points in relation to the 10 points provided. The perfection of the design in the broken parts, will be mainly taken into consideration. Eyelashes: form a line of black feathers that separates the eye and accentuates the oval shape of the cap.
Feather quality 10	Very shiny, perfectly adherent to the body and not rough at all.
Ground Colour 10	Yellow, white or red. The ground colour is regular and uniform. Golden yellow for intensive and straw yellow for silver. The non-intensive effect must be very well distributed. Red coloring allowed. The darker the better. The blue lizard, it exists as a dominant color and so the eumelanine is dispersed in the plumage and mixes with the white ground colour giving a tight and relatively short bluish-gray impression.

Beak, Legs and Nails 10	They should be as black as possible. Light colored beak, legs and nails are penalized.
Covert feathers (Lacings) 5	Covert feathers: form typical black lace borders that cover the base of the wing feathers, separated from each other.
Wings and tail 5	Wings and tail: The tail and wing feathers are as black as possible. Tail tight and relatively short. Wings well adhered to the body.
Size and presentation 5	Alert and lively. Good presentation. Size 13.5 cm / 5.31 inches.

Show Cage :

Type B (color canary) with 2 round perches separated by 12cm / 4.72 inches.

Diameter 12 mm / 0.47 of an inch.

Ground Colors: yellow, white or red.

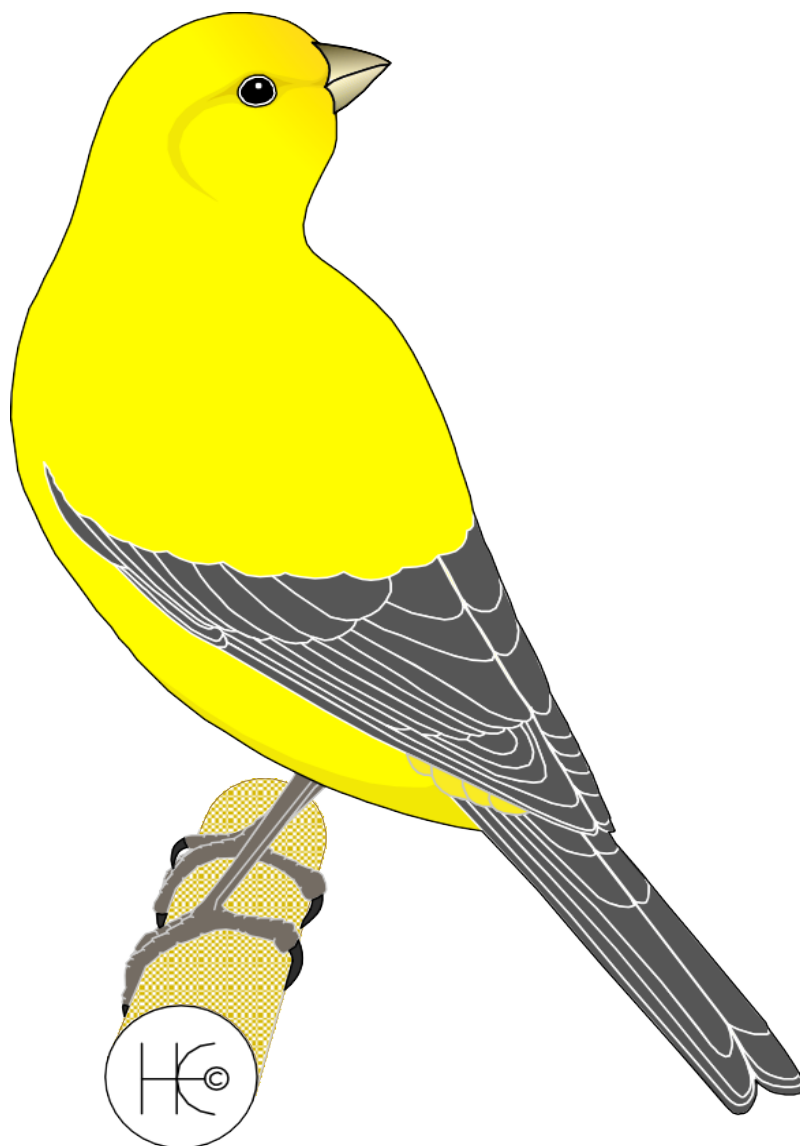

London Fancy

Standard

Points	Descriptions
Head and Body 25	The head and body should display the ground colour free, or almost free, from melanin (the smaller and fewer the better).
Wings and Tail 20	All wing feathers should be present and held closely to the body. The wing tips should meet along the center of the back. The wing feathers are so dark as to appear almost black. The tail is narrow and neat, with all feathers present and of the same colour as the wings.
Wing coverts 15	The greater covert feathers and the alulas at the wing butts should be the same colour as the wings. They combine with the tertiaries to form a dark crescent shape that contrasts against the clear body.
Ground Colour 15	The ground colour must be rich, deep and even. Intensive birds should display a luminous quality, non-intensive a softer, paler effect. White ground colour should be free from a yellow tinge. Colour feeding is not permitted.
Feather quality 10	The plumage should be fine, forming smooth flowing contours to the body with no suggestion of coarseness or looseness.
Legs, Nails and Beak 5	The legs, toes, nails and beak should be as dark as possible.
Size 5	Length 13.5 cm / 5.31 inches with a stance of 45°. A wide head and broad shoulders are an advantage.
Condition 5	The bird should be steady, confident and in excellent health.

Red color is not allowed.

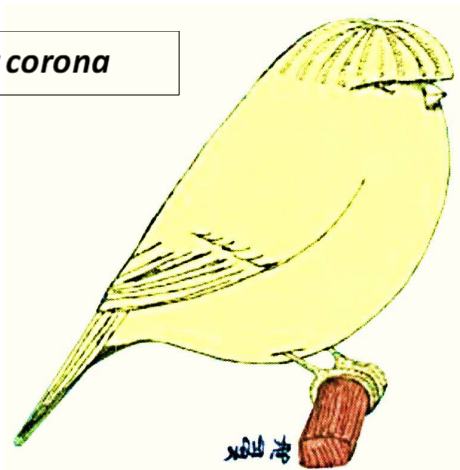

Gloster

Standard

Points	Descriptions
Size 20	The small as possible (max. 11 cm / 4.33 inches).
Corona Consort 20	<u>Corona</u> : very round and full. Adherent in the neck. Central point in the middle of the head and as small as possible. Eye still visible. <u>Consort</u> : very round and broad, eyebrows well marked, full cheeks. Beak conical and small.
Body 20	Back well filled, slightly rounded. Wings well closed. Chest very broad, round and stocky without prominence. Full neck, invisible when head ends and body begins.
Plumage 20	Close, firm, shiny and natural color.
Position 5	Proud. Semi-erect. Lively movement.
Tail 5	Short, narrow, at the same inclination as the back.
Legs and thighs 5	Short legs, slightly bent. Not visible thighs.
Condition 5	Healthy. Not damaged, clean. All colors are allowed, except red.

All colors are allowed except red.

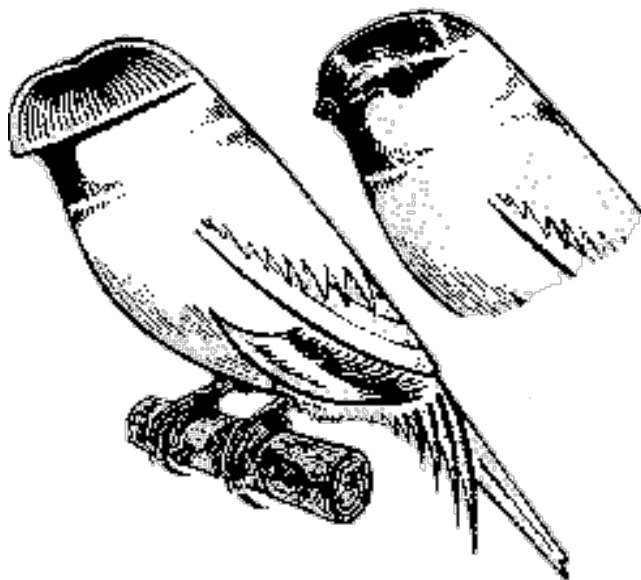

Crested/Crestbred

Standard

Points	Descriptions
Crest (Crested) Head (Crestbred) Beak Eyebrows 50	<u>Crest</u> : Large and perfectly round, proportionally distributed around a small central point. The feathers of the crest are abundant, long, wide and cover the eye, part of the beak and the back of the head. A crest can never be consider too big. A drooping crest will always have preference. <u>Head</u> : Broad and round in all directions. Long and abundant feathers start from the base of the beak and completely cover the skull to fall on the back of the head. A good crestbred head feather must, if turned over, reach the tip of the beak. <u>Beak</u> : Short. <u>Eyebrows</u> : heavy and drooping.
Plumage, Tail Wings, color 25	An abundance of feathers but without frills. Short and narrow tail. The wings cannot exceed the base of the tail. Rooster feathers on either side of the tail. All colors are allowed except red.
Body, Syze 15	The shape of the Bullfinch. Not stocky. ± 17 cm / 6.7 inches, well filled chest.
Legs - Thighs 5	Short legs with elbows and thighs well set back.
Condition 5	Healthy, clean and accustomed to the cage.

Norwich

Standard

Points	Descriptions
Shape – Type Presentation Size 25	Short and stocky body, with full and broad chest. Wide and full back. The rather large chest-back distance brings out a ball effect. Not too erect, not too reclining, phlegmatic carriage. Position : 45° angle. Size : 16 to 16,5 cm / 6.35 to 6.5 inches.
Plumage 20	Rich, full, tight and shiny, necessary to have the contours well pronounced.
Nap and Neck 10	The neck is short, full and broad without no retouching. Also very full in the throat.
Head 10	The head is round, heavy and full. The front of the forehead is full and wide. Chubby cheeks. The beak is short and conical. The eyes are well placed in relationship of the beak and remain visible.
Wings 10	Short wings well-adhered to the body.
Color 10	All colors are allowed, including orange - red. Rich and brilliant color.
Tail 5	Short and tight tail in relation to the whole bird, well placed in the axis of the body.
Legs and Thighs 5	Neither too long nor too short, robust. The thighs are visible only when the bird is moving.
Condition 5	Healthy, without defects or deformities.

Rasmi

Standard

Points	Descriptions
Position 20	Graceful posture, from head to the end of tail forming a straight line. Consistent and robust appearance. Position of the body forms a 50° angle with a horizontal line. Complete harmony between all parts of the bird.
Size 20	Size 21 cm / 8.25 inches minimum. The goal is to enlarge the size updating the standard.
Tail 20	The long tail is in extension with the body, and clearly on a straight line with the back. The end of the tail width should not be smaller than the shoulders width. The length of the tail must be in proportion with the body length.
Body, Wings & Plumage 15	Long, elongated body with well implanted shoulders attached to the body. Long wings covering at least 1/3 of the tail. Primary flights aligned and regular. The tips of the wings joining in the upper part of the tail without crossing. Plumage smooth, neat, solid and semi-long.
Head & Neck 10	Round and slightly flat head in the upper part of the skull and proportional to the body. Short conical beak. Well marked neck, not too big or too short. Round eyes with no eyebrows.
Legs 10	Strong and firm legs. The thighs are long and visible. Feathered thighs.
Condition 5	The bird should be healthy, vibrant and active. All colors are allowed except red factor.

Diameter 12 mm / 0.47 of an inch

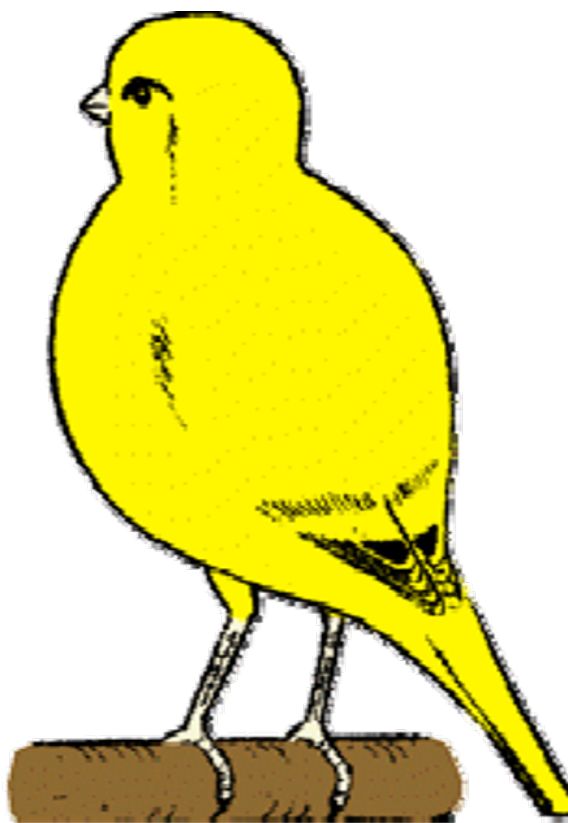

All colors are allowed except red.

Border

Standard

Points	Descriptions
Position and Carriage 15	Gay, jaunty, with full poise of the head standing at an ideal angle of 60°.
Body 15	The profile when viewed to the side will have a well filled and rounded body showing no heaviness with a curve to the chest and back in harmony running in a straight downward curve to the root of the tail. Viewed from above the shoulders shall be in balance with the depth of body showing a nicely rounded bird from all angles. Splits in the chest feathering to be avoided.
Color 15	Rich, soft and pure, as level in tint as possible throughout, but extreme depth and hardness such as color feeding gives are debarred. Any exhibit showing the effects of colour feeding will be disqualified.
Head and Neck 10	Head well rounded and neat when viewed from any angle, beak fine. Eyes clear and positioned to rest on an imaginary line drawn as an extension to the line between the upper and lower mandible of the beak, very slightly forward of a central point of the head. Neck in keeping with the head, showing a distinguishing break between head and shoulders. The size of the head should be in balance with the body. Cuts or openings in the feathering between the head and the body should be avoided.
Wings 10	Compact and carried close to the body, covering the back, with a full compliment of primary and secondary flight feathers meeting at the tips. Outer flight tips to meet at the root of the tail. Primaries and secondaries to be pointed.
Plumage 10	Close, firm and fine in quality, presenting a smooth, silken glossy appearance, free from browiness, frill or roughness and cuts or splits in the chest and neck feathers.
Health and Condition 10	Condition and cleanliness shall be essential.
Legs and Feet 5	Must be of sufficient length and showing thigh all in harmony with the size of the bird allowing it to adopt a gay jaunty stance. Feet in keeping with the legs, both to be clean and without blernish.
Tail 5	Close packed and narrow, being nicely rounded and well filled in at the root.
Size 5	The ideal length from the top of the head to the tip of the tail is 14.6 cm / 5.75 inches. Length should be in proportion and balance with the other features of the bird.

Lancashire (Cuppy/Plainhead)

Standard

Points	Descriptions
Head and Crest 25	<u>Plainhead</u>: top of the skull broad and slightly flattened, with well-defined eyebrows that should not cover the eyes. <u>Cuppy</u>: horseshoe shaped, more pronounced at the front part, leaves half of the eye free and well adhered to the nap of the neck. Melanin feathers are allowed in the crest but should not go beyond the area of the neck. Grizzled crests more appreciated than dark.
Size 25	21 cm / 8.25 inches. The goal will be to increase the size of the bird. Larger birds are preferred.
Body, Plumage and Legs 20	Full and long body. Point of greatest expansion between the abdomen and the chest. Broad and visible shoulders. Back broad, full and long. Plumage well furnished, thin and rather long. Long wings. Complete absence of "cock feathers". Legs long, strong, slightly bent and show part of the thighs.
Position 15	Erect and graceful posture. Tail long and wide, does not follow the line of the back so as to form a slight curve from the head to the tip of the tail.
Nape and Neck 10	Full and clearly visible neck. Retracted at the base "bottle neck".
Condition 5	Healthy, without defects. Perfect hygiene. Uniform color, white and yellow, intensive and non intensive. No melanin allowed except in the crest.

Salentino

Standard

Points	Descriptions
Position 25	The position is at right angles with the neck stretched and of medium length, the back perpendicular to the perch with the tail being the natural continuation.
Body Shape 20	The body should not form triangles wherever it is observed. The chest should be flattened without prominence. The back forms a straight line to the tail, the shoulders should be tight, not high and should not show any depression with the back. The tail will be slightly open, dovetail.
Size 20	The ideal size is 12.5 cm / 5 inches or less.
Crest - Head 15	The crest should be well centered, of oval shape, compact, perfectly adhered to the head, formed of feathers which do not cover the eyes. The head is oval and slightly flattened at the top.
Plumage and Color 10	Smooth, tight and well adhered plumage on each part of the body, the plumage should not be loose and must be without frilling. Ground color : artificial red coloring, should be bright and evenly distributed. Exceptions are subjects with white ground color, without coloring.
Legs 5	The legs should be slightly bent and parallel carried.
General Condition 5	Clean, healthy, attentive and lively.

Yorkshire

Standard

Points	Descriptions
Position 25	Erect attitude, fearless carriage. Long legs, slightly bent, visible thighs.
Plumage 25	Compact, short and tight plumage. Wings proportionally long and symmetrically carried on each side of the back axis, touching a compact and tight tail.
Head 20	Full and round head. Full neck, carried evenly towards the top of the shoulders and back. Short beak. The eyes as close as possible to the center of the head.
Body 10	Shoulders proportionally broad, round and well carried and gradually emerging at the head. Full and deep chest, corresponding to the width and roundness of the shoulders and beginning at the base of the beak. All round and gradually decreasing (back and abdomen) towards the tail. The abdomen and the underside of the tail forming a straight line.
Size 10	Minimum 17 cm / 6.7 inches.
Condition and Color 10	Pure and well distributed color in case of artificial coloring. In good condition and healthy. Clean. All colors are allowed.

STANDARDS O.M.J. / C.O.M. OF TYPE CANARIES E2

Frills - Section E2

HEAVY FRILLED (ABUNDANT CURL):

- Parisian Frill
- A.G.I.
- Crested Padovan
- Non-crested Padovan
- Mehringer
- Rogetto

In breeds in which "twisted or corkscrew nails" are a distinguishing factor in the quality of the breed - such as the AGI, Frisé Parisien, Rogetto and Mehringer breeds - these can be cut accordingly due to animal welfare regulations. This nail cut must be done just after the first curve of the nail and is not subject to any penalty in the judgment.

LIGHT FRILLED:

- North Frill
- South Frill
- Swiss Frill
- Melado Tinerfeño
- Gibber Italicus
- Giboso Español
- Giraldillo Sevillano
- Benacus
- Crested Fiorino
- Non-crested Fiorino

The Frilling

We distinguish three main frilling:

The mantle, the jabot and the fins.

a) The Mantle or the Back frill

- Straight median line which covers all or part of the back symmetrically.
- In the shape of a rose and/or "bouquet"

b) The Jabot: Chest frill in the shape of either

- Shell
- Basket
- Heart

c) Fins:

- Symmetrical and raised frills of the flanks.

To recognize the different frills apart from their respective frilling, there is also the position:

The position :

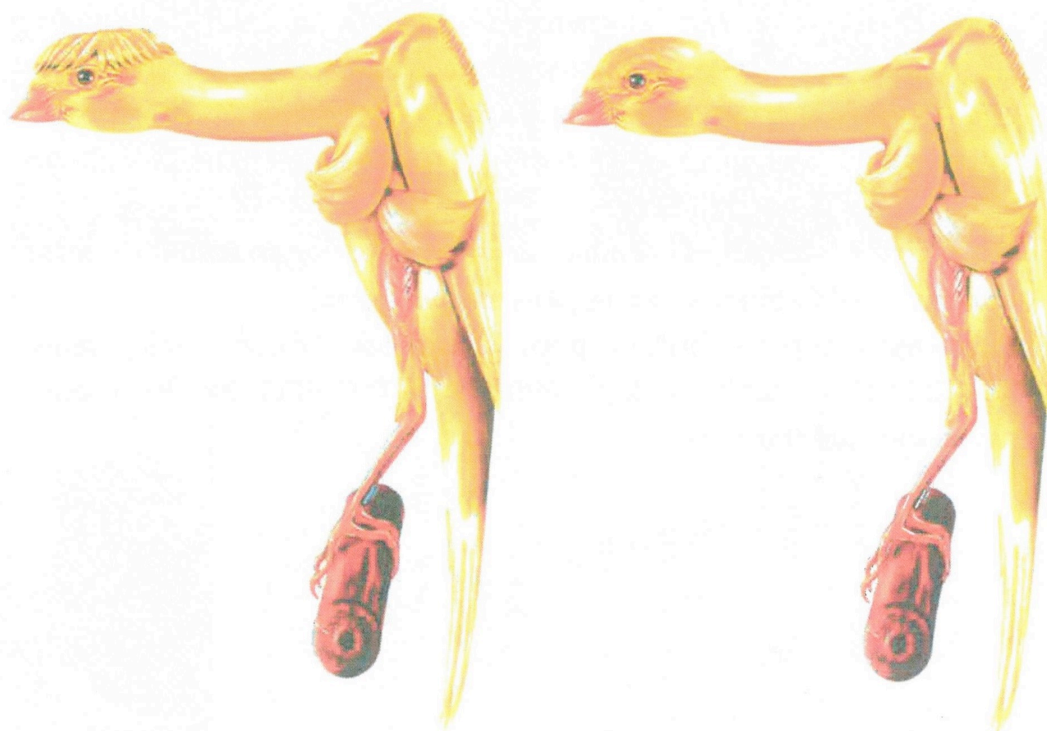

- Erected:
 - A.G.I. (60°)
 - Fiorino (55°)
 - Mehringer
 - North Frill (60°)
 - Padovan (65°)
 - Rogetto (60°)
 - Parisian Frill.
- In shape of 1:
 - Giboso Español
 - Giraldillo Sevillano
 - Mélado Tinerfeño
- In shape of 7:
 - Benacus
 - Gibber Italicus
 - South Frill
- In shape of half-moon:
 - Swiss Frill

Benacus

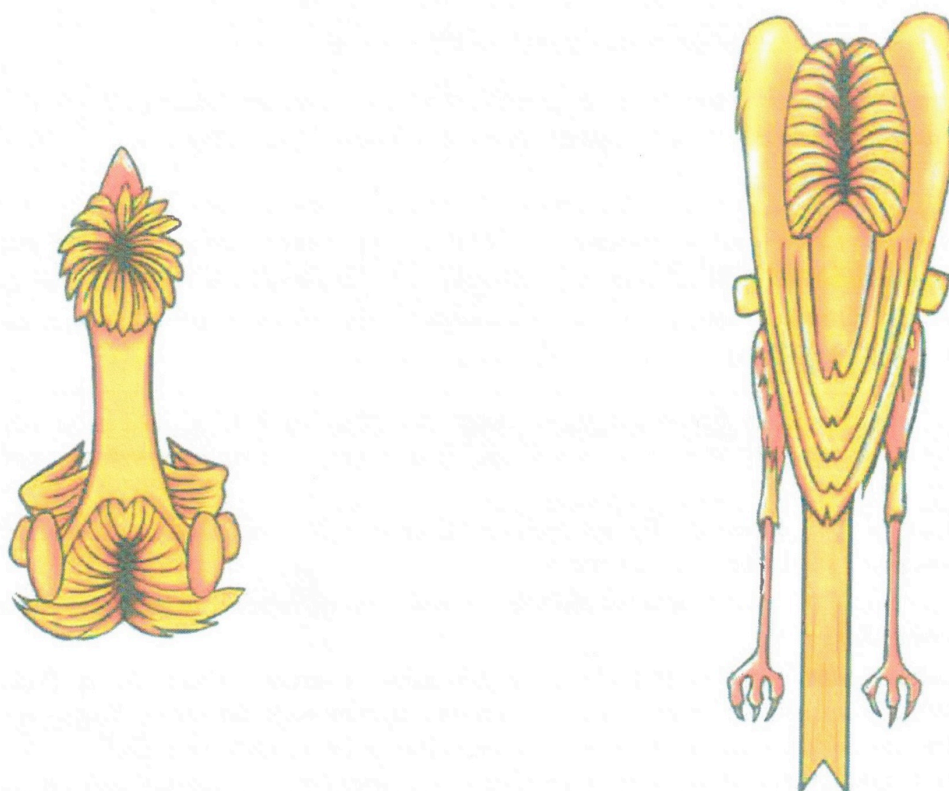

Standard

Points	Descriptions
Head and Neck 20	Crest: Complete crest, composed in accordance with the shape of the head, which starts from a central point, covering it entirely leaving the beak and the eyes uncovered. Non-crest: Smooth, hazelnut-shaped with no eye-brows. Neck: Long and smooth, stretched forward.
Position 15	In the shape of seven. Neck stretched horizontally at the level of the carpus in the working position, vertical body along with the tail and perpendicular to the perch.
Size 10	16 cm / 6.35 inches, well proportioned.
Jabot 10	Consisting of two curls that converge towards the center from both sides of the chest to completely cover the sternum.
Fins 10	Short, slightly bushy, symmetrical, facing upwards without covering the wings or reaching the mantle.
Legs and Thighs 10	Long, deplumed at the knees, slightly bent.
Mantle 5	With clear central demarcation, symmetrical, implanted between the back.
Plumage 5	Regular, shiny, not very voluminous. Smooth in the abdomen.
Wings 5	Long, uniform, well adhered to the body.
Tail 5	Length proportionate to the body, narrow and slightly forked at the end.
General Condition 5	In good health, active and clean. All colors are allowed.

Gibber Italicus

Standard

Points	Descriptions
Position 15	Permanently in the shape of 7. The head and neck go down lower than the shoulders. The head and neck form an angle of almost 90° with the body.
Head and Neck 15	<u>Head</u> : Serpentine, very small, smooth. <u>Neck</u> : As long and smooth as possible, slightly curved.
Legs and Thighs 10	Long legs and as perpendicular as possible with a slight inclination towards the back. Bare thighs on the front. The tarsus is perpendicular to the foot without forming an angle with the heel.
Mantle 10	Distributed symmetrically and well adhered to the wings. Not implanted too high.
Jabot 10	Small, short and symmetrical. In the shape of a comma. A small part of the sternum exposed at the throat.
Fins 10	Short but symmetrical, raised towards the shoulders without reaching them.
Size 10	Length 14 to 15 cm / 5.5 to 6 inches. Perfect proportions.
Wings 5	Regular and well adhered to the body.
Tail 5	Straight, narrow, homogeneous and complete.
Plumage 5	Rough and scanty, smooth abdomen. Only exposed in intensive and short plumage.
Condition 5	Active and healthy. All colors are allowed.

Giboso Español

Standard

Points	Descriptions
Position and Type 20	In the shape of 1. In position, the neck and head should form an angle of 45° to 60° with the trunk. Type : shows clearly the frilled and smooth parts.
Head and Neck 20	Small, serpentine and smooth head. Conical and proportionate beak. Neck: Very long, smooth and slender downwards.
Size 10	Minimum 18 cm / 7 inches.
Legs and Thighs 10	Long and rigid legs. Thighs un-feathered in front and slightly bent back.
Jabot and Abdomen 10	Well proportioned with the frilling inwards on each side towards the center, so as to show the sternum completely bare. Smooth abdomen.
Wings and Mantle 10	Wings long in proportion and well adhered to the body without crossing. The tips of the wings slightly detached from the body. In proportion. Shoulders carried high with symmetrically distributed frills on each side of a midline that forms a mantle that covers well the back.
Fins 5	Slight frilling that start symmetrically on each side of the body to form two small flanks.
Tail 5	In proportion to the body, narrow and directed slightly towards the perch to touch it gently.
Plumage 5	Plumage well closed on the smooth parts and sparse on the frilled parts. All colors are allowed.
Condition 5	Healthy and clean. Used to the show cage.

Giraldillo Sevillano

Standard

Points	Descriptions
Position 20	In the shape of one (1), the trunk at the vertical to the perch, neck inclined with an angle of minimum 45 ° and the tail that touches the perch.
Size 15	Max. 15 cm. / 6 inches, preference will be given to the smallest. The size is calculated as follows: A) from the tip of the beak to the center of the shoulders. B) from the center of the shoulders to the base of the tail. C) from the base of the tail to the tip of the tail. B and C should not be more than 9 cm / 3.5 inches.
Crest 15	Crest oval as the head, bushy, with feathers as long as possible, with a central point and adhered to the nape of the neck.
Head and Neck 15	<u>Head</u> : small, oval, slightly raised in relation to the neck line and covered with smooth feathers. Proportionate beak. <u>Neck</u> : Very long, thin, sloping and covered with smooth feathers. Without frills.
Legs 10	Very long, rigid. Thighs un-feathered in front and visible at the junction with the body.
Chest 5	Long, narrow with visible sternum, looking like a comma . A feathered sternum is to be penalized to the maximum.
Back 5	Long in form, narrow, shoulders carried high. Short, symmetrical, well proportioned mantle distributed on each side of the midline of the back. Wings adhered to the body without crossing each other, the tips of the wings slightly detaching from the body.
Fins 5	Symmetrical in volume and height, small and adherent to the body. If it misses a fin, strong penalization.
Tail 5	Narrow, closed and grazing the perch, ending in an inverted "M" shape.
General Condition and Plumage 5	Plumage : fine, well adhered to the body. Healthy and clean. Complete plumage. Only the crested is allowed in judgement.

Mélado Tinerfeño

Standard

Points	Descriptions
Position 20	Erected in the shape of number 1, seen from behind the head is not visible. In the working position, the shoulders are raised as high as possible. Head and neck projected forward. The legs are vertical and straight. Tail perpendicular to the perch. Shape: large, voluminous, perfectly noticeable in the areas of smooth and curly feathers.
Neck and Head 20	Neck: as long as possible and thick (from beak to shoulder more than 5 cm / 2 inches), covered with smooth feathers. Cylindrical. Always projected forward and downward forming an angle of 45° or less to the body. Head: Proportionate, covered with smooth feathers. Conical and proportionate beak.
Jabot (Chest) 20	Wide, with short frills that arise symmetrically from each side of the chest to the center, so as to allow to see the sternum and abdomen covered with smooth and short feathers. Smooth abdomen.
Fins (Flanks) 10	Curly feathers which are born on both sides of the body and form two large fins, tight, symmetrical without adherence to the wings.
Size 10	Minimum 18 cm / 7 inches.
Mantle (shoulders) and Wings 10	Broad, with high shoulders, with feathers that start symmetrically from the midline of the back and fall abundantly on both sides of the back forming a very voluminous mantle. Long and well adhered to the body, without crossing.
Legs and Tail 5	Long, stiff, with feathered thighs. Long and tight tail. Perpendicular to the perch.
General condition 5	Healthy and clean. Accustomed to the cage. All colors are allowed.

Fiorino

Standard

Points	Descriptions
Size and Shape 15	Voluminous. Good shape, well filled. 13 cm / 5.1 inches – with perfect proportions.
Head and Neck 15	<u>Crest</u> : round and regular, symmetrical. Central point of the crest well in the center of the skull. Visible eye. <u>Non-crest</u> : large, smooth and round head with visible eyebrows. <u>Neck</u> : smooth, well exposed with or without small bare spot.
Position 10	Erected, body and tail forms an angle of 55° with the horizontal.
Plumage 10	Silky, voluminous. Smooth on the abdomen.
Mantle and Shoulders 10	<u>Mantle</u> : symmetrically distributed on the whole back. <u>Shoulders</u> : well developed.
Fins 10	Voluminous, symmetrical, raised just above the edge of the shoulders. Good implantation like the other lightly frill feathers.
Jabot 10	Symmetrical, voluminous. Closed shell shape.
Wings 5	Regular, complete and well adhered to the body.
Legs and Thighs 5	Long, well feathered, strong toes and nails.
Tail 5	Short and narrow.
Condition 5	Clean, active and healthy. All colors are allowed.

AGI (Arricciato Gigante Italiano)

Standard

Points	Descriptions
Head, Neck, Collar 15	<u>Head</u> : round and voluminous with a conical beak, broad at the base. Complete or partial curl of the head (Cap), the eye is visible. <u>Neck</u> : smooth feathers with a frill in the shape of a collar all around. <u>Collar</u> : straight and turned up, shaped like a gutter.
Fins 15	Voluminous, long. Broad above the thighs, rising symmetrically on both sides to the curve of the wings.
Size 10	Minimum length 21 cm / 8.2 inches. In harmony with the whole.
Plumage 10	Supple and fine, very voluminous. All colors are allowed.
Mantle and Bouquet 10	<u>Mantle</u> : wide, long, very extensive feathers forming a rose-like curl from the central area on the back. <u>Bouquet</u> : small, but the arrangement on the rump is abundant.
Jabot and Abdomen 10	<u>Jabot</u> : voluminous. On both sides, the feathers converge upwards, forming a "fan" in the area near the collar, without causing any opening. <u>Abdomen</u> : rich in frills. The feathers are oriented upwards and unite with the jabot without forming empty spaces.
Tail 10	Long and wide, with rooster feathers. The end is closed.
Position 5	Proud, forming an angle of about 60° by relative to the perch. The tail, in the continuation of the back is slightly drooping.
Wings 5	Regular and powerful, adhered to the body. A slight crossing of the ends is allowed.
Legs and Feet 5	<u>Legs</u> : Robust and strong. <u>Feet</u> : strong, ensuring a good grip on the perch. Twisted or tended to twist nails.
General condition 5	The bird is clean and presents itself in good condition. Vigilant attitude, used to the exhibition cage.

Show cage :

Type C1 « Parisian Frill » with 2 round perches spaced 12 to 13 cm / 4.72 to 5.1 inches apart

Diameter 14 mm / 0.55 of an inch

All colors are allowed.

Mehringer

Standard

Points	Descriptions
Size 20	13 cm / 5.1 inches.
Mantle and Bouquet 15	<u>Mantle</u> : voluminous, falling symmetrically on each side of a median line. <u>Bouquet</u> : The bouquet is an additional plumage, implanted in the bottom of the mantle and between the wings, directed on the left or on the right side.
Jabot and Abdomen 15	The plumage on both sides of the chest runs and touches in the middle of the chest. The abdomen is also frilled.
Fins 15	The flanks above the thighs are voluminous and on both sides symmetrically rising.
Head, Collar, Sideburns 10	The head of the Mehringer is rather broad and well frilled, it must be in harmony with the proportions of the body. The head is inserted into the shoulders by a corolla of straightened feathers forming a collar. The cheeks are provided with sideburns.
Legs and Feet 5	Short, with frilled legs. Nails twisted or tended to be twisted.
Tail 5	The tail should be wide and tight. Rooster feathers are present on both sides of the tail.
Position 5	The maintenance is erected. The head, back and tail should show a straight line.
Plumage 5	Voluminous and silky.
Condition 5	Presented in good conditions of health and cleanliness. All colors are allowed.

Diameter 12 mm / 0.47 of an inch

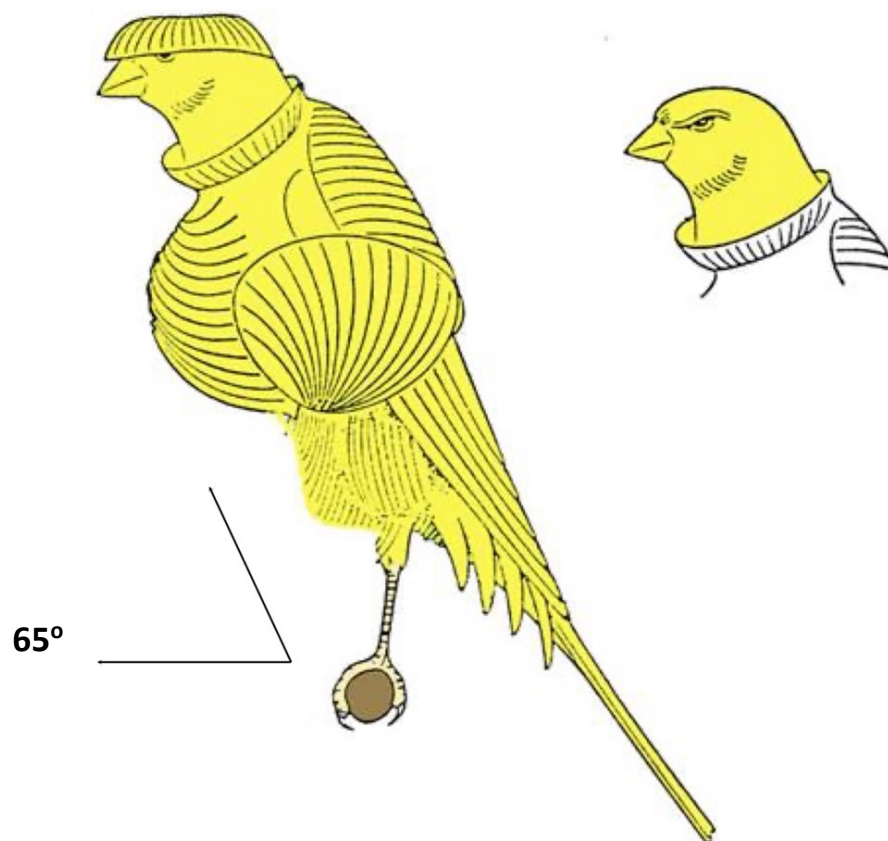

All colors are allowed.

Padovan

Standard

Points	Descriptions
Head, Crest, Neck and Collar 20	Beak: adapted to the size of the bird. The crest is composed of soft feathers which fall on the beak and the eyes. The crest covers well the back of the head. Smooth and well released neck. Complete collar at the base. A minimal bare part on the back of the head is allowed. The non-crest bird should have a large and smooth head with well-defined eyebrows.
Plumage 10	Silky and abundant. Voluminous on the abdomen.
Size 10	18 – 19 cm / 7.08 – 7.48 inches with perfect proportions.
Position 10	Well erected. The head, body and tail form an angle of $\pm 65^\circ$ with the horizontal.
Jabot 10	Voluminous, rising with void below the jabot. Separation between jabot and abdomen with light frilling.
Mantle 10	Voluminous and symmetrically distributed to cover the entire back.
Fins 10	Voluminous, symmetrically implanted and raised to the mantle.
Wings 5	Regular and well adhered.
Legs and Feet 5	Well feathered thighs. Strong legs, feet and nails. Nails not corkscrewed.
Tail 5	Homogeneous, provided with rooster feathers on each side of the tail, long and broad.
Condition 5	Active, clean and in good health. All colors are allowed.
